OBJECTIVE

Seeking a position as a Java Web Developer in an interesting project with modern technologies where extensive experience will be further developed.

WORK EXPERIENCE

Issoft

October 2014 — Present

Software developer

The goal of the project is to implement a secure place for collaboration and document management in the cloud. The project contains a lot of features: internal and external actors communications with email notifications, document management with version control, workflow for continuous development, access control and traceability, task management with deadlines, bulk file import and export, drawing management with revision history, archiving, online viewer and editor, deviation handler, mobile applications, etc.

My tasks:

- Design and development of stable REST API according to the best practices
- A lot of improvements in the following areas: email notifications, file management, task management, project activities, audit system, drawing management processes, bulk import, export, project internationalization, mobile application, version control, etc.
- Set up application deployment and continuous integration processes
- Carried out bug fixing in all the areas of the project

Tools and environments, languages and technologies:

- Java 8
- Spring Boot
- Spring Security
- Alfresco
- CMIS
- Keycloak
- OpenIDConnect
- OAuth2
- JUnit
- Mockito
- WireMock
- Slf4j
- Retrofit
- Freemarker
- Gradle
- ExtJS
- JS ES6
- React
- Redux

- Material UI
- Jasmine
- Grunt
- Webpack
- Sencha Touch
- Cordova/Phonegap
- React Native
- Tomcat
- nginx
- node.js
- Wildfly
- Google Analytics
- Prometheus
- Grafana
- Git
- Bitbucket
- Jira
- Docker
- Openshift
- Artifactory
- AWS EC2
- Jenkins
- TeamCity

IBA

April 2014 — October 2014

Software developer

The goal of a project was to create a web based document management system, which operates with various documents including requests, reports, signatures, etc. The system extends the documents with additional meta-data and properties. It keeps the documents change history and supports various workflows. All users belong to security groups and have appropriate roles assigned.

My tasks:

- Development of new features
- Carried out bug fixing

Tools and environments, languages and technologies:

- JSP
- Servlets
- XSLT
- Maven
- IBM FileNet
- IBM WebSphere
- Apache POI
- SVN

IBA

August 2013 — April 2014

Software developer

A web based system with a wide set of functions. It allows easy configuration of the bank business processes, performs management of the employee information, operates with various documents, generates reports, etc.

My tasks:

- Development of plugins that generate reports about employees and signatures
- Development a number of new reports
- Development of new presentation components
- Implemented management of files
- Fixed bugs in a JavaScript framework
- Implemented the reports conversion into MS Excel format

Tools and environments, languages and technologies:

- Apache Struts
- Dojo
- Ant
- IBM FileNet
- IBM WebSphere
- Apache POI
- SVN

IBA

June 2013 — August 2013

Software developer

The goal of Support of Bank Content Management System project was to rework CMS and replace an old unsupported component with the appropriate IBM products.

My tasks:

- Was getting familiar with IBM Tivoli Storage Management for Backup API
- Created various product configuration under VMs

Tools and environments, languages and technologies:

- IBM Tivoli Storage Management

QUALIFICATIONS

- BelHard courses. Android development
- Itransition courses. Java development
- IBA courses. Java SE development
- IBA courses. Java EE development
- Issoft courses. React JS development

EDUCATION

Human Engineering and Ergonomics

September 2016 — Present

Belarusian State University of Informatics and Radioelectronics

Artificial intelligence

September 2011 — June 2016

Belarusian State University of Informatics and Radioelectronics

Obtained the Specialist Degree

LANGUAGES

English - Advanced

INTERESTS

Sport, travelling, programming, board games
